

Likelihood workflow

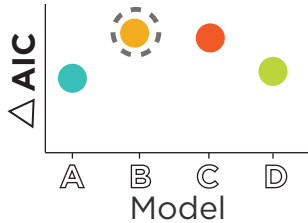

Analyze **multiple** models

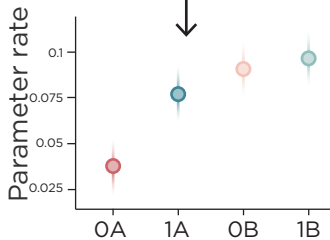

Model Selection

+ Calculate Bayes Factors

Choose best fit model

Interpret single point estimates

models

- A** all rates equal
- B** Speciation rates equal, extinction rates different
- C** Speciation rates different, extinction rates equal
- D** all rates different

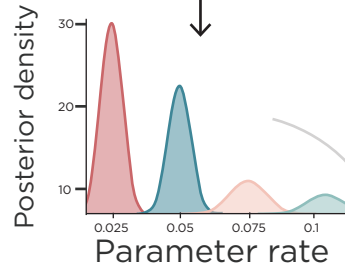

Bayesian Workflow

Analyze **one** model

HiSSE

or MuHiSSE with more states

Explore output

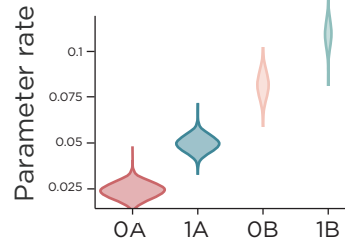

compare output to determine model

Alternative view of same output

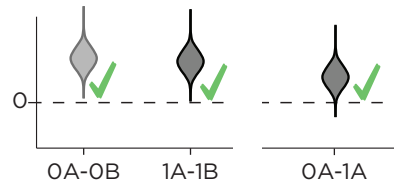

Interpret posterior densities

are hidden states different?

are trait states different?

Form test statistic to compare
